Concept

AskLocal is an application that allows users to gather information about what is happening at a specific location at this moment in time. Users will post questions to the app, and the users who are in that location at present will receive a notification that a question has been asked.

AskLocal is aimed towards connecting the community to answer specific questions about a particular place. An example of this might be, is there a class running at UQ in room 49-316 today at 4pm? The app aims to have people at the building give instant responses to the question. The app uses GPS location services and push notifications to provide the best experience.

Q&A

What can I use the points for?

You can use your points to post questions. As a tip, the higher the number of points you set, the sooner your question will be answered.

How can I get more points?

You can earn points by answering questions. However, your answer must be the highest rated to earn the maximum points. You can achieve this by trying to make your answer as specific as possible. Other users have the ability to vote on answers and the answer with the highest number of votes get the most points while the others may get half or below depending on the number of votes they received.

Can I still post questions if I don't have any points?

No.

Do I get points by rating other people's question?

No.
